# Add to the PATH on Windows 10

March 17, 2018 1 min read

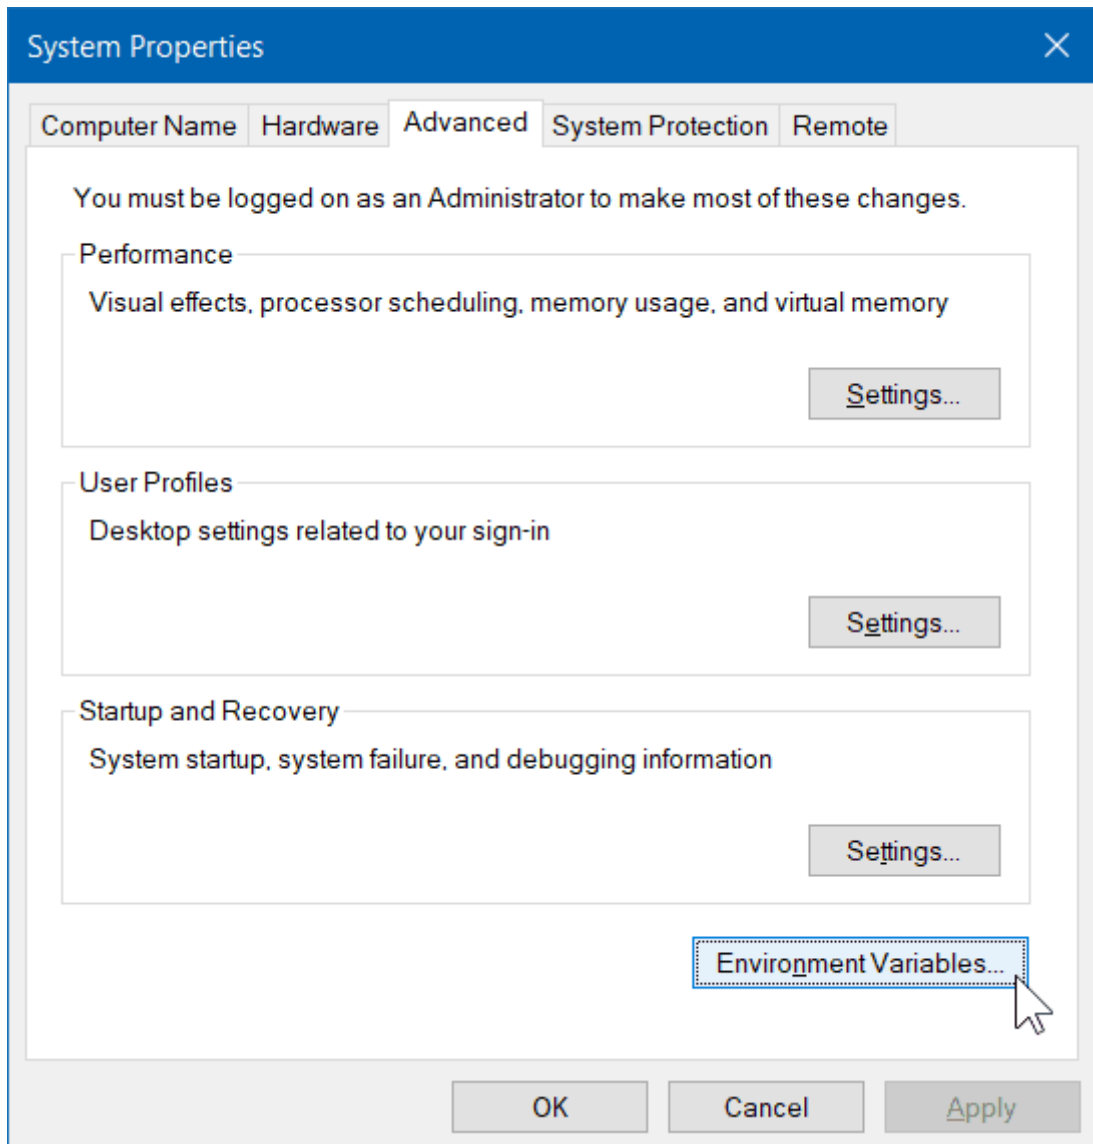

Hello fellow internet citizens! Here is a concise guide to modifying the PATH on Windows 10!

- Open the Start Search, type in "env", and choose "Edit the system environment variables":

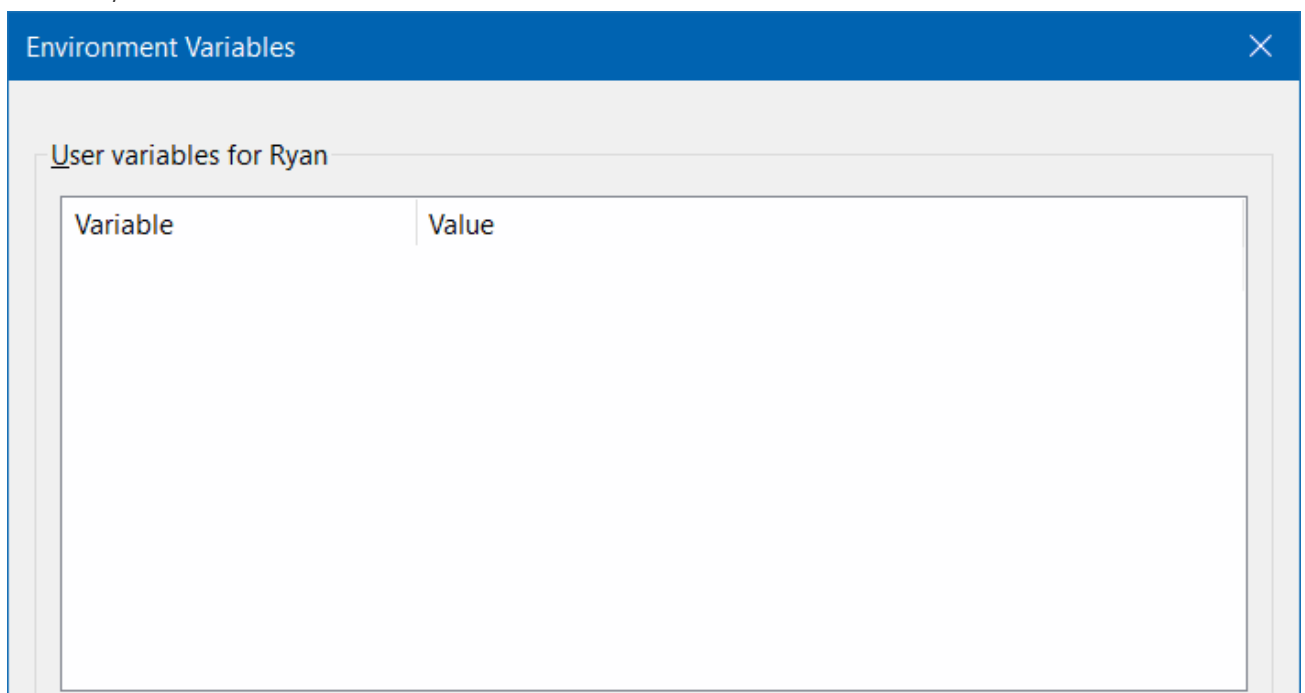

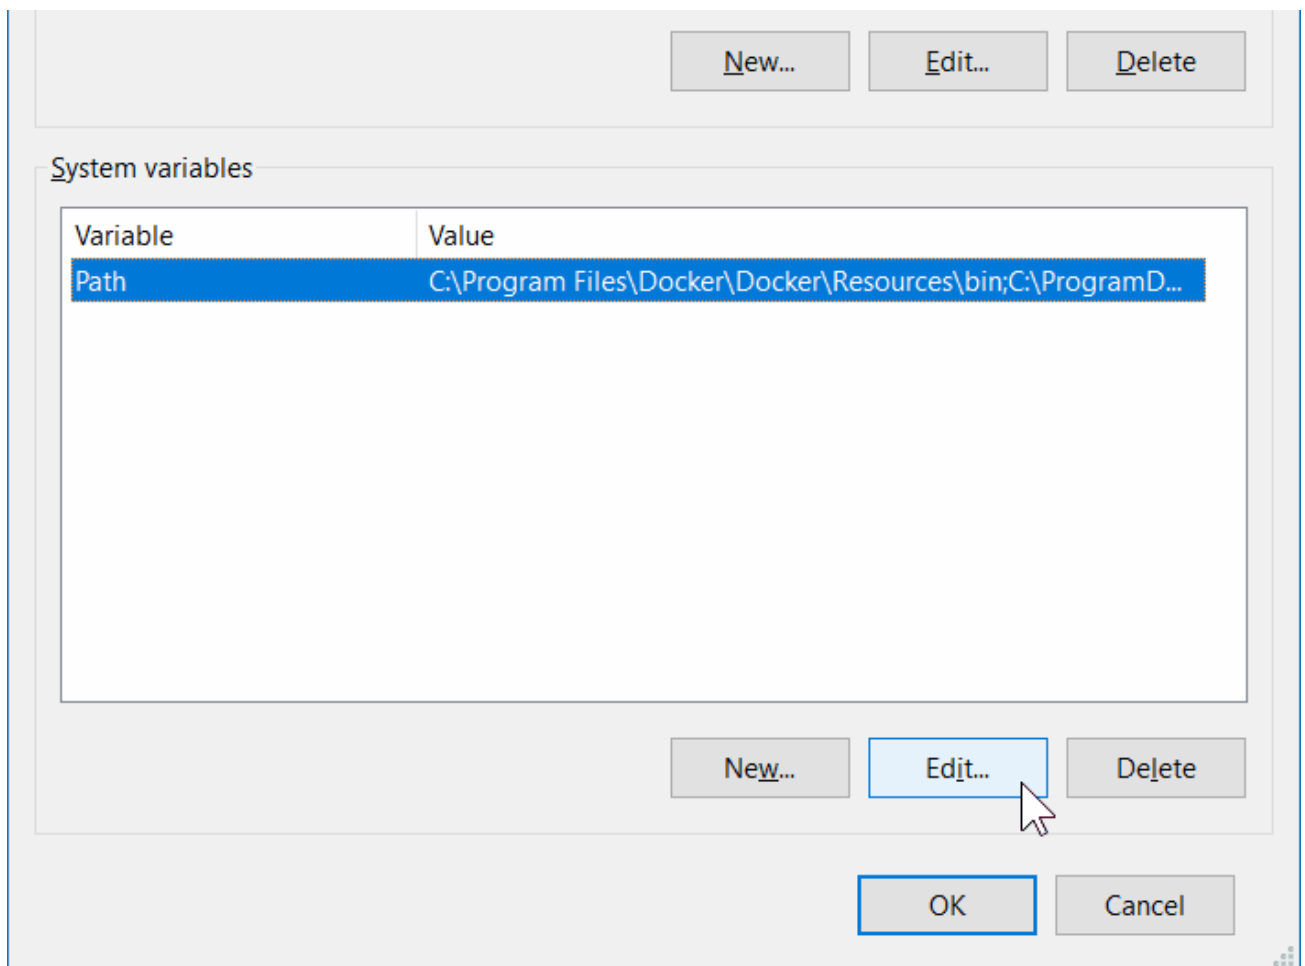

- Click the "Environment Variables..." button.

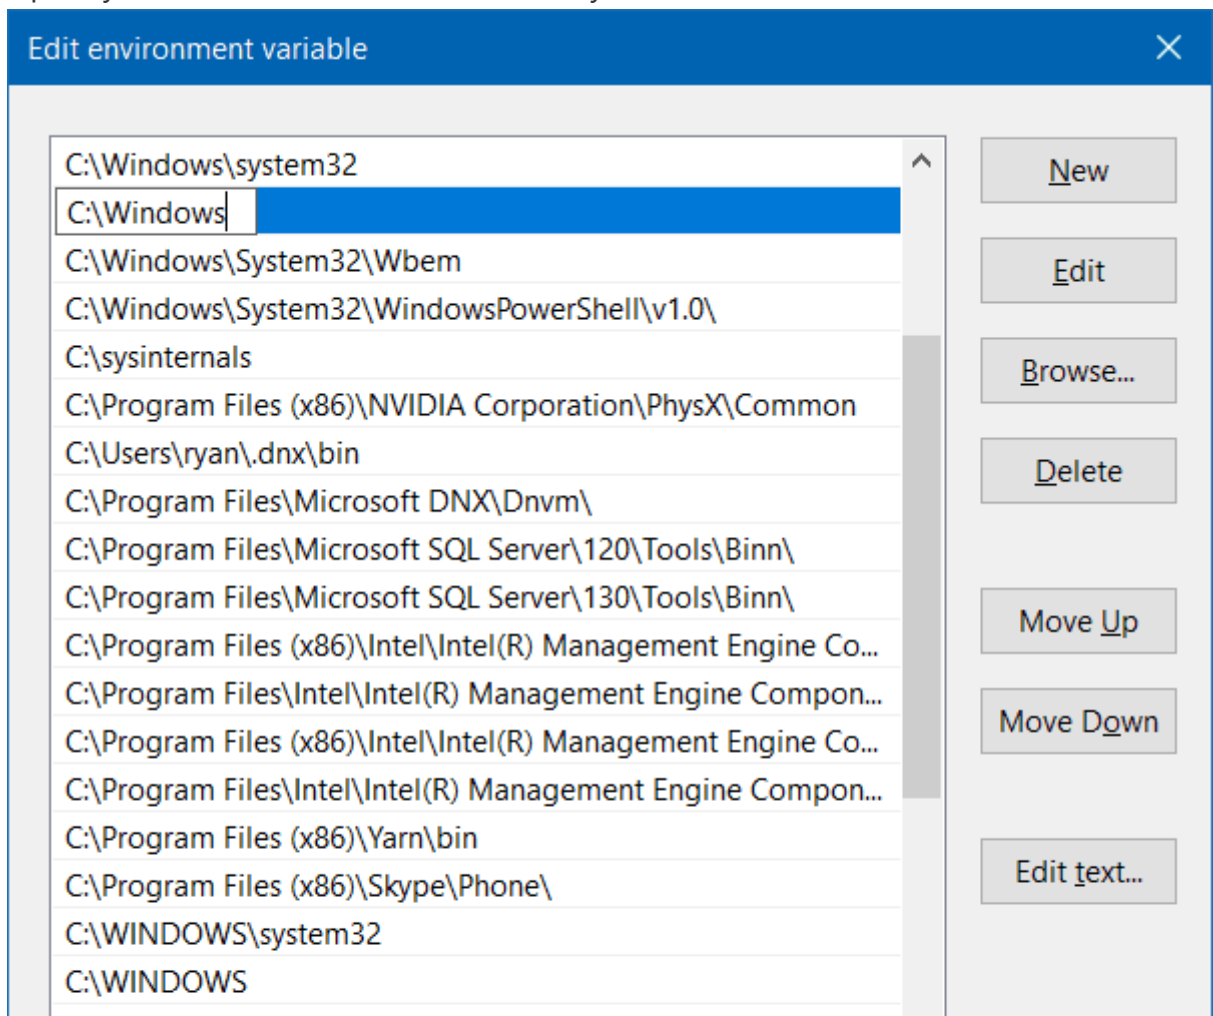

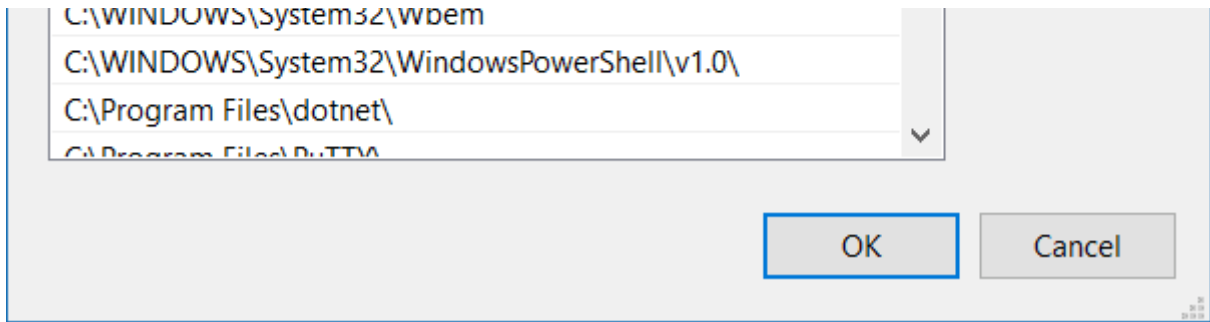

- Under the "System Variables" section (the lower half), find the row with "Path" in the first column, and click edit.

- The "Edit environment variable" UI will appear. Here, you can click "New" and type in the new path you want to add. From this screen you can also edit or reorder them.

- Dismiss all of the dialogs by choosing "OK". Your changes are saved!
- You will probably need to restart apps for them to pick up the change. Restarting the machine would ensure all apps are run with the PATH change.
- To test it, in *new* PowerShell window, type:

`$env:PATH`
